

## Digital Innovation Mentorship Program

Our all new program is designed to engage students in a short-term, group or one-on-one mentoring relationship with a leader in technology in the Philadelphia area. Our 3-part program focuses on developing skills and relationships that will help a student be successful in their emerging professional career.

### About The Program

Our mentorship program is broken down into 3 modules, each focusing on a specific part of the tech or business world that students may further develop their knowledge in the industry, unique skill sets, and leadership skills. The goal of the program is to provide students with the encouragement, motivation, and guidance that they need to be successful in the future.

Our first module focuses on the innovation that comes from 3-D printing and the basic principles of robotics. Module 2 takes students to the next level by focusing on the entrepreneurial aspects of creating a business. Our last module is all about video production. By the end of this module, students will be able to create a podcast, develop a basic tv show, or implement live streaming techniques. The program wraps up with a final project where students take what they learned and create their own video demonstrating the importance of technology and where they believe it can take them in the future.

### Who Should Apply

Anyone who is interested in a future career in technology.

### For More Information

For more information on each module, who should apply, and how to apply, please visit our website at [digitalinnovation.info/mentoring](http://digitalinnovation.info/mentoring).
